

## AMENDMENTS IN THE SPECIFICATION

*Please replace paragraph 0018, beginning on page 6, with the following:*

[0018] The bracket 11 is mounted to the enclosure 15 for covering the aperture 17. The bracket 11 has a base portion 31 and a movable portion 33 that is movable relative to the base portion 31. The movable portion 33 is movable between an extended position (**Figures 1, 3, and 8-10**) such that the bracket 11 is configured to cover the aperture 17 in the ~~[[first]]~~ second form factor (i.e., for the ~~[[low profile]]~~ full-height AGP card 19). The movable portion 33 also has a retracted position (**Figures 4-7**) such that the bracket 11 is configured to cover the aperture 17 in the ~~[[second]]~~ first form factor (i.e., for the ~~[[full height]]~~ low profile AGP card 21). Although only the two types of AGP cards are illustrated, one skilled in the art will appreciate that the same bracket 11 can be attached to both types of PCI cards (i.e., low profile and full height) as well. In the extended position, the movable portion 33 is coplanar with the base portion 31. In the retracted position, the movable portion 33 is out of plane with respect to the base portion 31. In the embodiment shown, the movable portion is substantially perpendicular to the base portion 31 while in the retracted position.
